

GUIDE

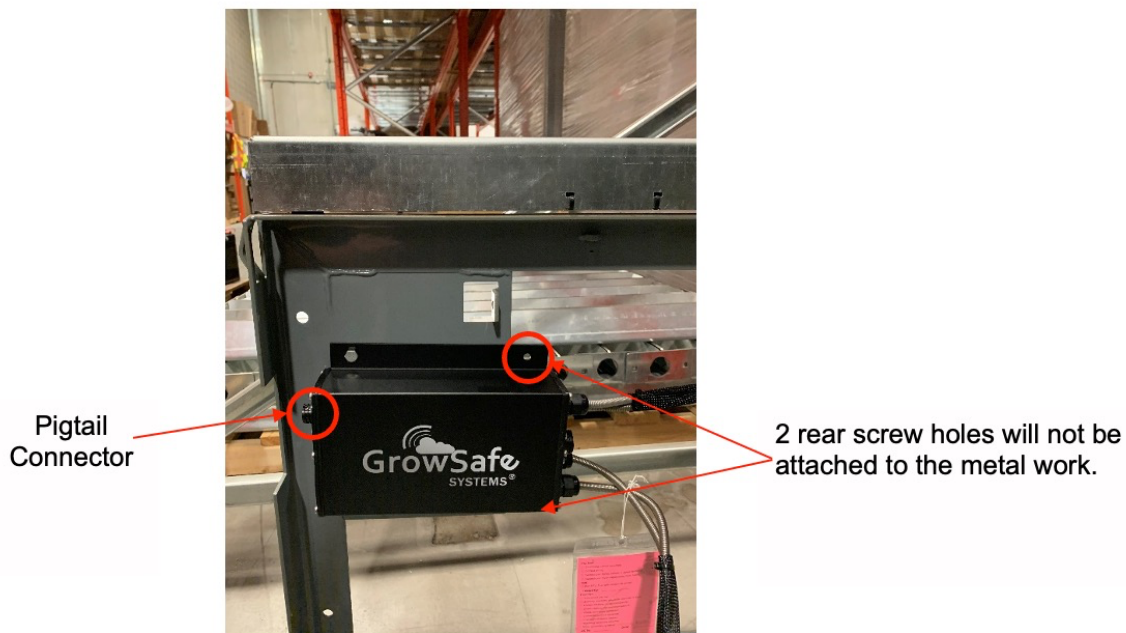

TITLE: NEW FEED INTAKE RTU ENCLOSURE_6000 AND 8000

Vytelle has updated the RTU enclosure box. The new RTU enclosure box is constructed of black anodized aluminum. The new RTU enclosure is located further back on the Feed Intake metal framework – providing more protection for the pigtail.

Mounting the RTU Enclosure

Mounting of the new RTU enclosure is no different than mounting the old RTU enclosure.

The main difference is that the RTU enclosure is recessed further back on the Feed Intake metal framework, and the 2 rear screw holes are not attached to the metal work.

Connecting Data Cable

6000 data cable – data cable connector is located on rear side of the RTU enclosure.

8000 data cable – data cable connector is located on front side of the RTU enclosure.

Pigtail Connector

Vytelle

Pigtail connector is located on the front side of the RTU enclosure. Ensure to disconnect Pigtail when removing the trough. Ensure to re-connect pigtail when RTU is mounted and test with Test Wand to ensure system is functioning.

TECHNICAL SUPPORT

If you have any further questions please contact Vytelle SENSE Technical Support at support@vytelle.com or by calling toll-free from US & Canada: 1-866-689-3477 ext. 1. The team is available Monday to Friday 7:00am to 5:00pm MST (excluding Canadian Statutory Holidays). After hours, please leave a detailed voicemail, email, or trial note and a TSR will respond the next business days.
