

IN VITRO FERTILIZATION

The Ovum Pick-Up (OPU) process is the first step of *in vitro* fertilization, where oocytes are collected from the donor before being taken to a Vytelle lab.

Simple and Streamlined

Flexible Donor Selection

Eligible donors include heifers as young as 6 months, open cows past 15 days postpartum, and pregnant cows up to 100 days of gestation.

Convenient

Locations Near You

Our satellite locations provide convenient access to expert care, with some even offering donor housing for added ease.

Semen Coordination

Coordinate & prepare semen logistics with your satellite or customer service representative; plan to send two straws per sire.

BEFORE
the OPU

Stress-Free and Easy

Chute-Side Experience

Grab a coffee and stay chute-side. OPU sessions last 10-15 minutes, using epidural anesthesia for comfort.

Bring Your Donors

With no shot schedule, simply load up your cows and arrive without added stress and labor.

Back Home Same Day

Your cows will be back home with you that afternoon—no overnight stays required.

DAY
of OPU

Continued Care

Communication With Your Satellite Manager

Stay connected with your satellite manager for updates and support.

We're in This Together

We'll keep you informed every step of the way because your success is our success.
